SUMMARY

Senior Unity engineer with 9 years shipping and maintaining mobile, PC and XR games, including live-ops on high-profile titles like **Stumble Guys** and **MARVEL Strike Force** at Trick Studio, and on **Word Crack** and **Trivia Crack Retro Quiz** at Etermax. I join existing teams and codebases to stabilize live products, clear legacy and store-compliance issues, and ship gameplay, UI and monetization features on deadline, working remotely with teams in the US, Canada and the UK for the last three years.

Core stack: Unity · C# · Android · iOS · WebGL · Meta Quest · Unity Gaming Services · In-app purchases

EXPERIENCE

Dedalord — Senior Software Engineer · Remote · Client projects (Canada, US) and own titles **Jul 2024 – Jun 2026**

- **EverForest, Carbon Counts' live match-2 game:** a year in a 12-person team, where I led and implemented the in-game store redesign (virtual currencies, bundles and in-app purchases) and built parts of the seasonal events and progression revamp.
- **Unannounced title** (E-Line Media): integrated Google and Apple sign-in through Unity Gaming Services and built a new game intro.
- **Running Fred, Super Falling Fred, Skiing Fred and SuperSonic Jack:** kept four live titles (15M+ combined downloads) on Google Play and the App Store by meeting a hard delisting deadline. This involved upgrading Unity to the 2025 security patch, fixing legacy bugs, resolving store compliance issues and helping migrate ads from AdMob to ironSource.

Trick Studio — Technical Lead (co-development for Scopely) · Remote **Jul 2023 – Jun 2024**

- Led a 9-person cross-discipline pod inside the **Stumble Guys** live-ops team (100M+ downloads), owning the in-game messaging that steers player cohorts to new features and store offers.
- Revamped the popup system to be data-driven, letting game designers and marketing showcase new gameplay and economy features without a new build; shipped 4 new popup types on it.
- Implemented deep linking into screens not designed to open outside their original flow; later adopted by other pods.
- Wrote the technical design documents and estimates for each feature and defended them before the game's technical directors.
- Moved to **MARVEL Strike Force** (50M+ downloads) to clear legacy bugs and technical debt in UI and character VFX.

Etermax — Software Engineer · Buenos Aires **Mar 2022 – Jun 2023**

- Took an unannounced live-service trivia game (NDA) from prototype to a feature-complete release candidate in one year, in a 15-person team; built its core question gameplay.
- Co-developed a Unity WebGL companion app, later reused in headless mode as an internal video-rendering tool.
- Live-ops on **Word Crack**: shipped a new in-game word dictionary feature with the live-ops team. Fixed bugs on **Trivia Crack Retro Quiz**.

Novaworks — Lead Software Developer · Buenos Aires **Aug 2021 – Feb 2022**

- Led an 8-person team delivering VR, Kinect and Decentraland experiences for corporate clients.

3DAR — Software Engineer · Buenos Aires **Jan 2020 – Jun 2021**

- One of 4 engineers on **Paper Birds**, among the first hand-tracking experiences on Meta Quest, later released on Steam; selected at the Venice, SXSW and Tribeca festivals.
- Built the core interaction systems on top of the OVR and OpenXR SDKs, using Oculus hand tracking while it was still pre-release.
- Optimized rendering, memory and asset streaming for Quest hardware, and ported the project to HTC Vive for its Steam release.

Coto — Software Engineer · Buenos Aires **Nov 2018 – Jan 2020**

- Built gameplay, UI and multiplayer features for **BioSquad**, a 30-player networked VR shooter (Oculus Rift, UNet).
- Built Unity editor tools so designers could configure waves, encounters and sessions without code.

Earlier roles

- **Arktoz Game Studios** — Freelance Software Engineer (Mar 2018 – Jan 2020)
- **WTechnologies** — Software Engineering Trainee (Jul 2017 – Jan 2018)

INDEPENDENT PROJECTS

Personal and collaborative work **Jul 2026 – present**

- **YASS**: designed, built and published a top-down shooter-looter solo in 30 days (Unity 6, browser and Windows), using AI coding agents (Claude Code, Codex) as daily programming partners.
- **Co-op space game** (in development): a 2D online co-op game in Unity and Photon Fusion.

SKILLS

Engineering: Unity (2017 to Unity 6), C#, software architecture, design patterns, SOLID, MVP, TDD

Platforms: Android, iOS, PC, WebGL, Meta Quest, HTC Vive, Oculus Rift

Services: Unity Gaming Services, in-app purchases, AdMob, ironSource, UNet, Photon Fusion

Delivery: Jenkins, GitHub Actions, Git, Perforce, Unity Profiler, Google Play Console, App Store Connect

Practices: technical design, code review, mentoring, Extreme Programming, AI coding agents

EDUCATION AND LANGUAGES

Universidad Argentina de la Empresa (UADE) — Technical degree in Video Game Development, 2018

Languages: Spanish (native), English (proficient, C1)
